

The 2023 Port of the Future Conference – now in its fourth year – will address the urgent and emerging issues facing ports, regulators, and associated industries, focusing on creating and revitalizing infrastructure and processes, across maritime domains.

This year's Conference seeks to bring the leaders of 50 seaports from the United States and Canada, Europe, the Middle East, and Central and South America to Houston – to present and discuss the vast accumulated knowledge and experiences, to address the port and maritime industries' most pressing challenges, also formulating viable solutions, and highlighting best practices.

Participants will hear from industry leaders, government agency executives, and prominent researchers on their visions for Ports of the Future, projected trends and emerging challenges, promising research, and new, innovative technology.

Featuring keynote presentations, case studies, panel, interviews, and breakout discussions, the focus of this edition 2023 will be shaped by research and innovation, advances in technology, increased dependence on automation, enhancements in data security and information sharing, and heightened environmental compliance – all impacting the ability to move cargo and people rapidly and securely across international borders.
