The second edition of the Digitalised Smart Ports Conference will be taking place in Valencia on the 26th and 27th of March, 2025, a two-day event to discuss on the future of this rapidly evolving industry with a focus on the current challenges and innovation opportunities.

As digitalization continues to evolve, ports that adapt will likely lead in the future of global logistics. The shift towards digitalized smart ports is essential for enhancing the efficiency and competitiveness of trade at international level Digitalized ports are not only driving efficiency and reducing operational costs, but they are also paving the way for a more connected global logistics network. By embracing advanced technologies, the ports can also contribute to a more sustainable maritime industry.

Key topics of the conference will cover indeed not only the digitalization trends and emerging technologies, but also the regulatory frameworks affecting smart ports, increasing of their interconnectivity, cybersecurity to keep assets and customers safe, coordination across supply chains and any improvements, experiences and learning opportunities, best practices, and more.

The Digitalised Smart Ports Conference will attract a wide range of attendees, industry leaders, experts, shipping companies, engineering companies, associations and legislators, and other stakeholders interesting to discuss the future of smart ports. Investors and venture capitalists will be attend to evaluate emerging technologies and companies with potential for growth as well as policy-makers and regulators creating regulatory frameworks and policies to promote sustainable development, new opportunities, and environmental protections.
