

The GreenTech for Ports and Terminals Conference will take place on 22nd February 2023 in Hamburg (Germany), one of Europe’s leading sustainable port hubs that will provide an excellent backdrop to the event.

The green technology conference will feature large-scale and current case studies from leading stakeholders on future fuels, electrified equipment, sustainable AI applications and more, as well as C-level panels discussing key strategy points for tomorrow’s smart green ports.

A full-day’s worth of content featuring case studies and keynote addresses from leading stakeholders in the industry with panel discussions hosting the world’s leading Ports and Terminals, as well as the terminal operators, in one place to discuss disruptive ideas and showcase innovative technologies driving down emissions from operations and the decarbonisation of the maritime industry.

The industry’s net-zero target is a mission which will require a focus on collaboration. Therefore, after nearly a decade of experience hosting flagship events for ports and terminals, Port Technology International (PTI) launch una platform to collaborate and share knowledge to ensure sustainability goals are met in the coming decades.
