

STUDIES AND RESEARCH

The “[Port Indicators 1 – 2017](#)” is the result of a partnership between SRM and Assoport, a publication dedicated to the monitoring and analysis of the main statistical data on the Maritime Economy. It is a report that includes the year-on-year trend of maritime transport, from an infrastructural, business, and economic perspective.

The aim is to offer an overview to the operators on the Mediterranean and on the meaning of the port dynamics developing in its wake. The report analyses the economy of the sea, at the international level, in Italy, and in the regions of Southern Italy (the “Mezzogiorno”). The parameters selected are aimed at analysing year-on-year trends in maritime transport from the economic, infrastructural, and business points of view. The indicators are grouped into five categories: Economic situation, International Trade Relations, Competitiveness, Companies and, lastly, Focus on the South of Italy.
